Oscar O. Jimenez Peguero

Curriculum Vitae | Europass Format

Personal Information

Address	Santo Domingo, Dominican Republic
Telephone	+1 809 966 2254
Email	oscar@osnarci.online
LinkedIn	linkedin.com/in/oscar-osnarci-jimenez/
GitHub	github.com/oscarjnz
Website / Portfolio	osnarci.online
Project Website	securitysmartservices.site
Nationality	Dominican

About Me

ICT Engineering student (concentrations in Cybersecurity and Software Development, expected graduation 2027) with hands-on experience in Node.js/TypeScript backend and SQL, application security, and Linux server operations with Docker. Administers the institutional CRM at UNIBE, runs a Debian VPS on GCP with custom monitoring, and has independently shipped four full-stack web applications (Fly.io, Render, Cloudflare Workers, Supabase). Detected and closed a cross-user data leak in production by applying Supabase RLS with Clerk authentication. Applied cybersecurity training (Google Cybersecurity Professional Certificate, Microsoft Cybersecurity Architect, Cisco Ethical Hacker) and experience in multicultural, high-pressure teams (FIFA U-17 Women's World Cup 2024).

Work Experience

Jul 2025 - Present | CRM Assistant / Cybersecurity Analyst / Jr. Software Developer

Universidad Iberoamericana (UNIBE) | Santo Domingo, DR

- Administer the institutional CRM platform for the IT Department, mapping and redesigning workflows to reduce manual processing steps and improve operational efficiency.
- Conduct recurring vulnerability assessments, continuous network monitoring, and server administration tasks, strengthening the organization's overall cybersecurity posture.
- Maintain and extend the institutional website on WordPress/Breakdance, delivering front-end improvements while maintaining uptime and platform reliability.

Oct - Nov 2024 | Official Volunteer, Media Operations and Services

FIFA U-17 Women's World Cup 2024 | Santo Domingo, DR

- Delivered logistical support and on-site event coordination for a FIFA-sanctioned international tournament, operating across multicultural teams under high-pressure, time-critical conditions.

Education and Training

2023 - Present | Engineering in Computer Technologies (TIC)

Universidad Iberoamericana (UNIBE) | Santo Domingo, DR. Expected graduation: 2027, in line with the current curriculum plan.
Concentrations: Cybersecurity and Software Development.

Personal Skills

Mother tongue: Spanish
Other language: English

	Understanding		Speaking		Writing
	Listening	**Reading**	**Spoken interaction**	**Spoken production**	
English	B1/B2	B1/B2	B1/B2	B1/B2	B1/B2

Communication skills: Effective communication developed through multicultural teamwork (FIFA U-17 Women's World Cup 2024) and cross-functional collaboration in an institutional IT department.

Organisational / managerial skills: Workflow mapping and process optimization (CRM administration); event logistics coordination under time pressure.

Job-related skills: Node.js/TypeScript backend development and SQL; application security (RLS, JWT authentication, least privilege, IDOR remediation); Linux server administration with Docker; vulnerability assessment and network monitoring; ethical hacking and penetration testing fundamentals; CRM/ERP administration (Odoo, Salesforce); relational database design; full-stack web application development.

Digital Skills

Information processing	Communication	Content creation	Safety	Problem solving
Advanced	Proficient	Proficient	Advanced	Proficient

Languages & Technologies: TypeScript (intermediate) · JavaScript (basic-intermediate) · Node.js · Express · Python (intermediate) · SQL · React · Next.js · HTML · CSS · Java (basic)

Backend, Data & Integrations: REST APIs and HTTP integrations · PostgreSQL (Supabase) · RLS and SQL migrations · WebSockets · Cloudflare Workers · n8n · AI APIs (Groq, Llama 3.3 70B)

Application Security: server-side authorization and per-user data isolation (RLS) · JWT and Clerk authentication · least privilege · secrets handling · IDOR remediation · input validation

Cybersecurity: Kali Linux · Ethical Hacking · Penetration Testing · Vulnerability Analysis · Wazuh (SIEM) · Wireshark · nmap · Cisco NetAcad

Servers & Infrastructure: Linux server administration (Debian, Ubuntu, Kali) · Docker · Apache and HTTPS (Let's Encrypt) · ufw and fail2ban · cron monitoring and alerting · VPS and PaaS (GCP, Oracle Cloud, Fly.io, Render) · DNS/SSL · Git and GitHub

Systems & Virtualization: Linux (Debian, Ubuntu, Kali) · Windows · VMware · VirtualBox

Tools & Platforms: GitHub · WordPress · Breakdance · Figma (basic) · Jira · Excel (advanced) · CRM/ERP (Odoo, Salesforce) · Supabase

Additional Information

Certifications

Google Cybersecurity Professional Certificate (8 courses), Google/Coursera, Dec 2025 · Microsoft Cybersecurity Architect, Microsoft, Nov 2025 · Technical Introduction to Cybersecurity 3.0, Fortinet Training Institute, Oct 2025 · Network Technician Career Path, Cisco Networking Academy, Aug 2026 · Ethical Hacker, Cisco Networking Academy, Feb 2024 · Introduction to Cybersecurity, Cisco Networking Academy, Feb 2024 · Ethical Hacking and Pentesting, Hacker Mentor, Sep 2024 · Computer Security from Scratch, Udemy, Jan 2024 · NDG Linux Unhatched, Cisco/NDG, Jun 2024 · Digital Transformation, University of Virginia/BCG/Coursera, Oct 2025 · Generative AI Applications, Google Cloud/Coursera, Oct 2025

Projects

Security Smart Services | Flagship project | In production | 2025

securitysmartservices.site

- Network security audit platform: inventories devices, detects exposed ports and services, and alerts on changes or threats. An AI assistant (Groq, Llama 3.3 70B) interprets each scan result.
- Cloud + local-agent architecture: scanning runs locally and never exposes the network to the internet, only outbound connections over WSS. A deliberate security and privacy decision.
- Node.js/TypeScript (Express) backend on Render, WebSocket relay on Fly.io, PostgreSQL on Supabase, and Clerk authentication.
- Production incident: verified against the live database that RLS was off on 15 tables and that the public anon key allowed reading every user's data. Integrated Clerk as Supabase third-party auth and rewrote the policies around the JWT sub, shipped with a migration, rollback plan and runbook; verified the anon role was blocked.
- Hardening: denylist validation of scanner arguments, output cap and timeout, and fixes for IDOR and relay robustness.

Personal infrastructure: Linux VPS on GCP | In operation | 2026

- Debian 12 VPS running n8n in a Docker container (auto-restart), Apache as a reverse proxy with Let's Encrypt HTTPS (auto-renewal), a ufw firewall with a DROP policy, and fail2ban.
- Custom cron-based monitoring with Telegram alerts: server and n8n health every 5 minutes, a check that workflows are running, and SSH access surveillance (unknown keys, password logins, new accounts). In 3 days it logged 4,908 failed SSH attempts from 240 IPs, with 96 fail2ban bans.

Nutriflow | In production | 2025

nutriflow-sigma.vercel.app

- Nutrition management app for body recomposition (gain, lose, or maintain weight; build muscle). Meal logging, daily macro calculation (protein, carbohydrates, fat) against goals, meal plans, and fasting control.

Active Calendar | In production | 2026

activecalendar.site

- Academic management tool that ingests the Blackboard (Anthology) calendar and shows the week's tasks with pending/done status. Exports reports as PDF, TXT, or PNG; Telegram bot with schedulable weekly reports plus email delivery.
- Backend deployed as a Cloudflare Worker with scheduled tasks (cron every 30 minutes), Clerk authentication, and a Supabase database with RLS.

Productivity OS | In development | 2026

productivity-os-beryl.vercel.app

- Productivity dashboard with customizable widgets (size, color, views), cloud-synced via a Google account. Widgets: clock, weather, traffic, unread emails, Spotify control, bookmarks, crypto, currencies, sports scores, and an AI assistant. Designed for multi-monitor setups.

Personal Portfolio

osnarci.online

- Bilingual site built with React 18, Vite, and TypeScript, deployed on Vercel, with HTTP security headers and reviewed technical SEO and accessibility.

Academic Projects

- TIC Tours: co-developed a university programming platform.
- Unit conversion tool integrating external APIs, built in Python.
- Performance comparison simulator (single-cycle vs. pipelined processors) with an interactive HTML interface, built in Python.
- Designed and integrated relational databases across multiple academic projects.
